TRAXLINE® cables for cable carriers

Hi-flex electric cables which were specially developed, optimised and tested for use in cable carriers can be found at tsubaki-kabelschlepp.com/traxline.

Load diagram for unsupported length depending on the additional load.

Sagging of the cable carrier is technically permitted for extended travel lengths, depending on the specific application.

Intrinsic cable carrier weight $q_k = 1.56 \text{ kg/m}$. The maximum additional load changes with deviating inner widths.

The gliding cable carrier must be guided in a channel. See p. 844.

Glide shoes must be used for gliding applications.

Only design 020 can be used for a gliding arrangement.

Stay variant 020 – closed frame

- » Weight-optimised, closed plastic frame with particularly high torsional rigidity.
- » **Outside/inside:** closed.

Stay arrangement on each chain link (**VS: fully-stayed**)

B_i 39 – 99 mm

The maximum cable diameter strongly depends on the bending radius and the desired cable type. Please contact us.

Calculating the cable carrier length

Cable carrier length L_k

$$L_k \approx \frac{L_S}{2} + L_B$$

Cable carrier length L_k rounded to pitch t

Divider systems

The divider system is mounted on every 2nd chain link as a standard.

Dividers, and the complete divider system (dividers with height separations) comes as diameter adjustable as standard (**version A**).

For applications with lateral accelerations and applications with the cable carrier rotated by 90°, the dividers can easily be fixed on the stay.

The arresting cams snap into the catch profiles in the crossbars (**version B**).

Divider system TSO without height separation

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	a _x grid [mm]	nr min
A	5	10	7	-	-
B*	9.5	10	7	2	-

The dividers can be moved in the cross section.

Divider system TS1 with continuous height separation*

Vers.	a _T min [mm]	a _x min [mm]	a _c min [mm]	a _x grid [mm]	nr min
A	5	10	7	-	2
B	9.5	10	7	2	2

* not for design 020

The dividers can be moved in the cross section.

Divider system		Version		nr		Height separation

Please state the designation of the divider system (**TS0**, **TS1**,...), the version, and the number of dividers per cross section [nr].

When using divider systems with height separation (**TS1**), please additionally state the position (e.g. VD1) viewed from the left driver belt. You are welcome to add a sketch to your order.

End connectors - steel

The steel end connectors can be connected **from above or below**. The connection type can be changed by altering the position of the end connector.

▲ Assembly options

Connection point

- F - fixed point
- M - driver

Connection type

- A - connecting surface outside
- I - connecting surface inside

Connecting surface

- A - threaded joint outside (standard)
- I - threaded joint inside

Order example

Steel	F	A	I
Steel	M	A	I
End connector	Connection point	Connection type	Connecting surface

We recommend the use of strain reliefs at the driver and fixed point. See from p. 904.
